Summary

Frontend-focused Full Stack Developer specializing in building responsive web and mobile applications using React.js and React Native. Experienced in developing real-world solutions including e-commerce platforms, role-based systems, and API-driven applications. Focused on clean UI/UX, performance optimization, and scalable code. Available for freelance projects and remote collaborations.

Services

- Build responsive websites using React.js
- Develop full-stack web applications (MERN stack)
- Convert UI designs (Figma) into functional applications
- Create REST APIs using Node.js and Express
- Fix bugs, improve performance, and optimize existing apps

Experience

React Native Developer Intern

Delightech, Pune

Dec 2025 – Mar 2026

- Contributed to a fitness application with chat, live sessions, and progress tracking features.
- Resolved UI and performance issues, improving overall app stability.
- Optimized frontend components for better user experience and responsiveness.

Projects

Role-Based Access Management System

React, Node.js, MySQL

- Developed a secure full-stack system for managing users, roles, and permissions.
- Implemented JWT authentication and scalable backend structure.
- Suitable for enterprise and admin dashboard solutions.

WatchNow (Mobile App)

React Native

- Developed a mobile app for browsing and managing movie watchlists.
- Integrated third-party API for real-time data and search.
- Implemented fast local storage for better performance.
